

Dr. Veli Stroetmann (MD, Ph D) has a master's degree and a Ph D in Medical Informatics from the Academy for Medical Sciences, Sofia, Bulgaria. She worked as a family doctor and a researcher in Medical and Health Information Science in Sofia, before joining *empirica* in 1992 as a Senior Research Fellow. Her research has focused on the application of ICT in the health and long-term care sectors. She led the Telehealth Working Group of the German Federal Government's nationwide *Forum Info 2000* initiative. Together with Jean-Pierre Thierry of Symbion, she conducted a study for the European Commission on the impact of ICT on patient safety and risk management in healthcare, "eHealth for Safety". Currently, she contributes to two projects to support the implementation of the European eHealth Action Plan and to improve interoperability among Member State health systems.

Dr. Jean-Pierre Thierry (MD, MPH) is a specialist in healthcare organisation and economy, biomedical and healthcare information technology. Jean-Pierre has 20 years experience in consulting and project management for the industry as well as for governments and hospitals. He worked for several professional organisations at a national level in France (National Medical Board, National Centre for Hospital Equipment and Centre for the Study of Advanced Technology). Jean-Pierre has also been the CIO of two large hospitals in the Paris area. He currently works as an IT expert for the National Agency for Hospital Investment and for the French region of Picardie. He was the coordinator of the "eHealth for Safety" study for the European Commission that he conducted together with Veli Stroetmann.
